Title: Perfect score: Sequence:

BLOSUM62 Gapop 10.0 , Gapext 0.5 Scoring table:

141681 seqs, 52070155 residues Searched:

141681 Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt_42:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Science 277:1453-1474(1997).
-!- FUNCTION: PROTEASE WITH A SHARED SPECIFICITY WITH DEGP/DEGP.
-!- SUBCELJUIAR LOCATION: Periplasmic.
-!- SUBCELJUIAR: Belongs to peptidase family S2C.
-!- SIMILARITY: Belongs to peptidase family.
                                                                                                                                                                                                                                                                                                                                        STRAIN=K12 / W3110;

Nature 413:852-856(2001).
-!- FUNCTION: SERINE PROTEASE THAT IS REQUIRED AT HIGH TEMPERATURE.
-!- FUNCTION: SERINE PROTEASE THAT IS REQUIRED AT HIGH TEMPERATURE.
SPECIFICITY WITH HHOA/DEGQ.
-!- SUBCELLULAR LOCATION: Periplasmic.
-!- INDUCTION: By heat shock.
-!- SIMILARITY: Belongs to peptidase family S2C.
-!- SIMILARITY: Contains 2 PDZ/DHR domains.

"A novel two-component regulatory system in Bacillus subtilis for the survival of severe secretion stress.";

Mol. Microbiol. 41:1159-1172(2001)

Mol. Microbiol. 41:1159-1172(2001)

Mol. Microbiol. 41:1159-1172(2001)

Mol. Microbiol. 41:1159-1172(2001)

G. FUNCTION: May be involved in processing, maturation, or secretion of extracellular enzymes.

G. FUNCTION: Membrane-bound (Potential)

G. INDUCTION: Transcription is css dependent. Induced by heat shock during exponential growth and by heterologous amylases at the transition phase of the growth cycle. Negatively regulates its own expression during exponential growth and during heat shock.

G. INDUCTION: Inactivation results in compensating overexpression of ytvA, especially during stress conditions.

G. INTIARITY: Belongs to peptidase family S2C.

G. INTIARITY: Contains I PDZ/DHR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright. ```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
